Core outcome data for children's acute and chronic pain services

Abstract

Participants can expect to be updated on the progress of national and international efforts to develop standardised outcome datasets for evaluating and improving pain services to children. Participants will be offered opportunities to engage in lively discussion in session, and join working groups to shape the future direction of national database development and improvement.

1A

Core outcome data for children's acute and chronic pain services

Chair: Professor Kathy Eagar, Australian Health Services Research Institute, NSW

Participants can expect to be updated on the progress of national and international efforts to develop standardised outcome datasets for evaluating and improving pain services to children. Participants will be offered opportunities to engage in lively discussion in session, and join working groups to shape the future direction of national database development and improvement.

Outcome domains and measures for acute and chronic clinical pain services will be discussed. Ethics, logistics, and burden versus benefits for consumers will be considered. In addition to the speakers, many colleagues involved in the development and piloting of the datasets will be present to contribute to discussion. The Chair will facilitate active discussion amongst participants in order to: explore experiences with using outcome datasets/reports; identify benefits and challenges; and establish future directions and methods for advancing consensus and utility.

Presenters:

Professor Kathy Eagar, Australian Health Services Research Institute, NSW

Dr Phil Russell, Princess Margaret Hospital for Children, WA

Dr Susie Lord, John Hunter Children's Hospital, NSW
